Novelty

- 2 The subject matter of the independent product claims 1 and 20 and the independent use claim 32 is novel (Article 33(2) PCT).
- 2.1 D1, in example 1, discloses a composition comprising 98.4% isomaltulose and 0.5% natural lemon aroma, furthermore additional sweeteners and salts of organic acids. The composition comprises in total 5.0% water and is suitable for use as instant beverage powder within the meaning of guideline C-III 4.8 (see also p.4 lines 24-25).
- 2.2 D2 discloses an instant beverage powder consisting of just 0.2-1.2% Stevia extract, the remainder being palatinose. The water content of the composition therefore appears to be below 5%. The composition is not cariogenic.
- 2.3 D3 discloses an instant beverage powder comprising 86% palatinose, 9% fruit juice powder and also citric acid, sodium citrate and vitamins. The application itself describes the use of up to 95% isomaltulose.
- 2.4 D4 discloses the use of palatinose for sweetening tea. The composition acts against the formation of caries.
- 2.5 None of the documents discloses a beverage powder comprising:
- ≥90% isomaltulose
 - 0.1-5% urea or a derivative thereof.

Inventive step

- 3 The simultaneous use of isomaltulose and urea derivatives in instant beverage powders having said composition solves the technical object of providing tooth-preserving instant beverage powders. Urea and its derivatives have, furthermore, buffering action and intensify the isomaltulose taste (p. 7, paragraph 1). These and other advantages are to be seen from the examples (see, for example, table 1; fig. 5).

Clarity

- 4 The description is not adapted to the modified set of claims, since the presence of urea, according to broad sections of the description, is optional and is not shown as part of the invention (Article 6 PCT).
